Biochem. Biophys. Res. Commun. 219:795-799(1996).
-i-FUNCTION: DOES NOT HAVE ALCOHOL DEHYDROGENASE ACTIVITY. BIND NADP AND ACTS THROUGH A ONE-ELECTRON TRANSFER PROCESS.
ORTHOQUINONES ARE THE BEST SUBSTRATES. MAY ACT IN THE DETOXIFICATION OF XENOBIOTICS (BY SIMILARITY).
-i-CATALYTIC ACTIVITY: NADPH + quinone = NADP(+) + semiquinone.
                                                                                                                                                                                                                                                                                                                                                                              SEQUENCE FROM N.A.
